(a) Heating broadens the area distribution
Probability after closure projection
Total linear area $A = q/2$
$T_* = 0.25$
$T_* = 0.5$
$T_* = 1$
$T_* = 2$

(b) Active faces and nonzero volume
Probability within the closed state
Temperature $T_* = k_B T/(\hbar\omega)$
Four nonzero-area faces
Nonzero positive volume
