(a) Entanglement between closed copies
von Neumann
Rényi 2
Entropy / k_B (nats)
$T_* = k_B T/(\hbar\omega)$
(b) Where the entropy resides
Area distribution
Within area sectors
Entropy / k_B (nats)
$T_* = k_B T/(\hbar\omega)$
(c) Coherent singlet creation on both sides
$\mathrm{Re}\langle F^\dagger_{12,L} F^\dagger_{12,R}\rangle$
$T_* = k_B T/(\hbar\omega)$
(d) Entanglement response to heating
$d(S_L/k_B)/dT_*$
$T_* = k_B T/(\hbar\omega)$
