Complete tetrahedral graph, $K = 4$, $U/t = 20$
baseline
V−
V+
χ−
χ+
Thermal positive volume
$\langle V_{RS} \rangle$
Inverse temperature βt
Volume-kernel probability
$P(V_{RS} = 0)$
Inverse temperature βt
Signed-grasp response
$\langle Q_\chi \rangle / \Delta Q_\chi$
Inverse temperature βt
Four-face-conditioned shape fluctuations
RMS angular standard deviation
Inverse temperature βt
